

### **Corrected and amended claims**

1. (currently amended) A pattern and project organizer comprising at least two flexible sheets of see-through plastic material having edges and being superimposed over each other and sealed together at their edges, at least two compartments being created between said at least two superimposed sheets, a first compartment being open at a top edge of said at least two sheets and being closed by a bottom seal substantially at a middle of said two sheets, [A] a second of said two compartments being located at a bottom of said at least two sheets and having an opening substantially at the middle of said two superimposed sheets and below said bottom seal, means for releasably sealing said opening.

2. (original) The organizer of claim 1 including means for fastening said organizer in a binder.

3. (currently amended) The organizer of claim 1, wherein said first compartment extends [all the way] to [the] a bottom of said two superimposed sheets to thereby form a large compartment, wherein said bottom is constructed as an expandable fold.

4. (original) The organizer of claim 1, wherein said at least two compartments are four compartments divided into two compartments on a left side of said at least two superimposed sheet and two compartments on a right side of said at least two superimposed sheets, said two compartments on the left side each having means for releasably sealing an entry into said compartments, said two compartments on said right side are open all the time for entry of articles therein.

5. (original) A pattern and project organizer being constructed of two superimposed flexible, see-through plastic material sheets forming a compartment there between and several individual compartments are subdivided within said two superimposed sheets, said compartments are separated from and are independent of each other, some of said compartments have open entry ends, others of said compartments having means for releasably sealing an entry into said compartments.

6. (original) The organizer of claim 5 including means for fastening said organizer into an organizer holder.

7. (original) The organizer of claim 6, wherein said organizer holder is a two ring binder.

8. (original) The organizer of claim 6, wherein said organizer holder is a three ring binder.

9. (canceled) [The organizer of claim 6, wherein said organizer holder is a holder having a clamping mechanism therein.]

10. (newly submitted) The organizer of claim 1 wherein said bottom seal is constructed as an expandable fold.

**Second correction of paragraph 3 on page 3 and continuing on page 4.**

Fig. 3 again shows two compartments G and H as were shown in Fig. 2. However, in this arrangement the compartment G extends the full length of the backing sheet 9 and it is heat sealed at the bottom at 13 by having the front sheet 1a superimposed to thereby form a large compartment. However the front sheet 1a can be subdivided by providing a second opening midway down the front sheet as is indicated by the arrow 27. A resealable closure 32 is attached to the front sheet by the heat seams 30 and 31. The compartment H also ends at the bottom 14 where compartment G ends. This end may be an expandable fold or gusset. This way the large compartment G can be entered through the arrow 26 and the arrow 27 into a smaller compartment. The front sheet 33 of the compartment H may be made of a clear or opaque plastic material.
